DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 rejected under 35 U.S.C. 102(b) as being anticipated by Shields (USPN 5,609,938).

Shields disclose a pressure-sensitive adhesive sheet (Column 10, claim 1) comprising a base material (Column 10, lines 19 – 21) and a pressure-sensitive adhesive layer (Column 10, lines 25 – 33), having formed therein a plurality of through holes passing through from one surface to the other surface thereof (Column 7, lines 19 – 22), and being liable to be subjected to a pressure of not less than 1 Pa (Figure 2a, wherein the pressure is applied during attachment); the pressure-sensitive adhesive sheet characterized in that: said through holes have a diameter in said base material and said pressure-sensitive adhesive layer in a range of 0.1 to 300 μm , and a hole density in a range of 30 to 50,000 per/ cm^2 (Column 7, lines 19 – 22); and said pressure-sensitive adhesive layer has a storage modulus at 70 °C of not less than 9×10^3 Pa, and a loss tangent at 70 °C of not more than 0.55 (Column 10, lines 25 – 33; wherein the same material has the same properties) as in claim 1.

Claim 2 defines the product by how the product was made. Thus, claim 1 is a product-by-process claim. For purposes of examination, product-by-process claims are not limited to the manipulation of the recited steps, only the structure implied by the steps. See MPEP 2113. In the present case, the recited steps imply a structure of a substrate with a hole through the surface. The reference suggests such a product. See column 7, lines 19 – 22 of Shields.
